

EventWatch® AI

RISK DETECTION, RESPONSE
& RECOVERY SIMPLIFIED

We apply powerful Natural Language Processing technology to detect disruptions across your global supply chain and quantify their impact on your business.

Now you can protect your sites by detecting potential threats within minutes, and act swiftly by leveraging our expert knowledge and research.

“In the 2011 Japan Earthquake, it took us 6 weeks to quantify impact. In the 2016 Japan Earthquake, it took us 6 Hours!”

DETECT

Monitor news across more than 53 languages with alerts sent right to your mobile app.

Eliminate noise, get unique and well researched notifications that are actionable by your experts.

Check our research about the event, and our assessment of the severity of the event.

RESPOND

Predict how an event anywhere around the world will affect your suppliers and sites.

Leverage Event War Room, the centralized command center, to triage and be informed to initiate necessary actions.

Model scenarios with What-If Scenario Planner to proactively gauge the impact potential.

RECOVER

Be the first to secure allocation before others during a disruptive event. Regain control of your supply chain performance with ease.

Let your supply chain experts remain focused on high value added activities. Our actionable research enables them to fix problems before they become major issues for you.

- Powered by AI & natural language processing to increase relevance
- Analyze Event Impact and Prioritize response
- Comprehensive event research & expert commentary
- API available, to connect logistics, planning or GRC systems

"For the unmapped suppliers it took us 2 weeks to ascertain we were not impacted. For the suppliers we had mapped, we drew a circle on the map, out popped the results in minutes. We went back to normal right away!"

"Before we had experience with the tsunami and other events, it could take several weeks to truly understand [what the impact was], now we can know in minutes."

"Resilinc's EventWatch solution has allowed us to constantly be aware of potential supply chain disruptions, and promptly initiate mitigations to protect our supply chain performance."
